NEWS RELEASE

EMBARGOED UNTIL RELEASE AT 9:00 A.M. EDT, WEDNESDAY, OCTOBER 16, 2013.

CFS DIVISIA MONETARY DATA FOR THE UNITED STATES:¹ SEPTEMBER 2013

The CFS Featured Broad Divisia Monetary Aggregates in September 2013

- CFS Divisia M4, including Treasuries (DM4) – the broadest and most important measure of money calculated by the Center for Financial Stability – grew by 3.2% in September 2013, on a year-over-year basis. In contrast, CFS Divisia M4 increased by 4.2% in September 2012 over the preceding year.
- The narrower version of the CFS Divisia M4, excluding Treasuries, (DM4-), increased by 4.1% in September 2013 over the year, relative to a year-over-year gain of 3.6% in September 2012.
- CFS Divisia M3 (DM3) advanced by 4.1% year-over-year, relative to an increase of 4.1% in September 2012.

The Narrow Divisia Monetary Aggregates in September 2013²

- CFS Divisia M2 (DM2) advanced by 6.5% year-over-year, relative to an increase of 7.0% in September 2012 over the preceding year.
- CFS Divisia M1 (DM1) advanced by 6.9% year-over-year, relative to an increase of 10.8% in September 2012 over the preceding year.

Most Significant Factors Influencing CFS Divisia M4 in September 2013

Positive Contributors to CFS Divisia M4 Growth

- The largest positive contributor to CFS Divisia M4 growth was commercial banks' savings deposits (sweeps adjusted), contributing an increase of 2.8% in the last 12 months ending September 2013. Their growth-rate weight was 27.5%. Unweighted, they increased 10.7% in the last 12 months. This component is included in all of the aggregates, except the narrowest (DM1).
- The second largest positive contributor to growth was demand deposits (sweeps adjusted), contributing an increase of 0.7% in the last 12 months ending September 2013. Their growth-rate weight was 8.8%. Unweighted, they increased 7.7% in the last 12 months. This component is included in all of the aggregates.
- The third largest positive contributor to growth was currency, contributing an increase of 0.4% in the last 12 months ending September 2013. Its growth-rate weight was 6.4%. Unweighted, it increased 7.2% in the last 12 months. This component is included in all of the aggregates.

¹ The CFS Divisia indexes in this release were constructed under the direction of Professor William A. Barnett. Dr. Barnett is the originator of the Divisia monetary aggregates, which he has been developing and refining for decades, in accordance with modern advances in economic aggregation and index-number theory.

² The narrow aggregates, DM1 and DM2, are similar to the MSI (monetary services index) Divisia aggregates, supplied by the St. Louis Federal Reserve Bank. See page 18 for the relationship between the CFS and the MSI aggregates. The broad Divisia monetary aggregates, DM3, DM4-, and DM4, are available only from the CFS, since no other source currently exists for broad Divisia monetary aggregates for the US.

Negative Contributors to CFS Divisia M4 Growth

- The largest negative contributor to CFS Divisia M4 growth was repurchase agreements, contributing a decrease of 0.9% in the last 12 months ending September 2013. Their growth-rate weight was 9.2%. Unweighted, they decreased 9.1% in the last 12 months. This component is included in DM3, DM4-, and DM4, but not in the narrower aggregates (DM1 and DM2).
- The second largest negative contributor to CFS Divisia M4 growth was T-bills, contributing a decrease of 0.4% in the last 12 months ending September 2013. Their growth-rate weight was 9.1%. Unweighted, they decreased 4.8% in the last 12 months. This component is included only in the broadest aggregate (DM4).
- The third largest negative contributor to CFS Divisia M4 growth was commercial banks' small time deposits, contributing a decrease of 0.4% in the last 12 months ending September 2013. Their growth-rate weight was 2.4%. Unweighted, they decreased 14.8% in the last 12 months. This component is included in all of the aggregates, except the narrowest (DM1).

Figure 1 - Recent Growth in Broad CFS Divisia Monetary Data³

Figure 2 - Recent Growth in Narrow CFS Divisia Monetary Data⁴

³ The broadest CFS Divisia monetary aggregates are **best** for most purposes. See p. 18 for background on the supporting research. We nevertheless provide the narrower CFS Divisia aggregates in Figure 2 for comparison.

⁴ The narrow aggregates shown here, DM1 and DM2, are similar to the MSI (monetary services index) Divisia aggregates, supplied by the St. Louis Federal Reserve Bank. For more information about the St. Louis Fed's MSI Divisia aggregates and their relationship to the CFS Divisia monetary aggregates, see p. 18.

Figure 6 - Components of CFS Divisia M4 - Highlights for September 2013

Components in this table build from the narrowest aggregate at the top to the broadest at the bottom. For example, the darkest green in the left column includes components of DM1. The next tier shows the components included in DM2, but not within DM1.

	Weighted Contribution To DM4 Money Annual Growth Rate*	Divisia Growth-Rate Weights (Average of Last 12 Months)	Unweighted Year-Over-Year Percentage Growth Rate
DM1			
Currency	0.4%	6.4%	7.2%
Traveler's Checks	0.0%	0.0%	-7.7%
Demand Deposits **	0.7%	8.8%	7.7%
OCDs at Commercial Banks **	0.1%	2.3%	3.3%
OCDs at Thrift Institutions **	0.1%	1.8%	7.2%
Added into DM2			
Savings Deposits at Commercial Banks **	2.8%	27.5%	10.7%
Savings Deposits at Thrift Institutions **	0.0%	4.6%	0.2%
Retail Money-Market Funds	0.2%	3.6%	4.6%
Small Time Deposits at Commercial Banks	-0.4%	2.4%	-14.8%
Small Time Deposits at Thrifts	-0.2%	0.8%	-21.9%
Added into DM3			
Institutional Money-Market Funds	0.2%	10.0%	2.4%
Large Time Deposits	0.4%	8.1%	5.6%
Repurchase Agreements	-0.9%	9.2%	-9.1%
Added into DM4-			
Commercial Paper	0.2%	5.3%	3.5%
Added into DM4			
T-Bills	-0.4%	9.1%	-4.8%

Note: The row labels in the first column are shaded to show which components are included into which aggregates. Each data column is shaded on a gradient from dark green (maximum) to dark red (minimum). See the figures 10-15 for these calculations over time and a chart version of the above table.

* Average of last 12 monthly weighted contributions to CFS Divisia M4 growth rates (annual rates). Unlike the other percent calculations in this report, the weighted contributions use continuous percent changes computed from natural logs.

** Sweeps adjusted.

Components That Are Pulling CFS Divisia M4 Up

The largest positive contributor to CFS Divisia M4 growth was commercial banks' savings deposits (sweeps adjusted), contributing an increase of 2.8% in the last 12 months ending September 2013. Their growth-rate weight was 27.5%. Unweighted, they increased 10.7% in the last 12 months. This component is included in all of the aggregates, except the narrowest (DM1).

The second largest positive contributor to growth was demand deposits (sweeps adjusted), contributing an increase of 0.7% in the last 12 months ending September 2013. Their growth-rate weight was 8.8%. Unweighted, they increased 7.7% in the last 12 months. This component is included in all of the aggregates.

The third largest positive contributor to growth was currency, contributing an increase of 0.4% in the last 12 months ending September 2013. Its growth-rate weight was 6.4%. Unweighted, it increased 7.2% in the last 12 months. This component is included in all of the aggregates.

Components That Are Pulling CFS Divisia M4 Down

The largest negative contributor to CFS Divisia M4 growth was repurchase agreements, contributing a decrease of 0.9% in the last 12 months ending September 2013. Their growth-rate weight was 9.2%. Unweighted, they decreased 9.1% in the last 12 months. This component is included in DM3, DM4-, and DM4, but not in the narrower aggregates (DM1 and DM2).

The second largest negative contributor to CFS Divisia M4 growth was T-bills, contributing a decrease of 0.4% in the last 12 months ending September 2013. Their growth-rate weight was 9.1%. Unweighted, they decreased 4.8% in the last 12 months. This component is included only in the broadest aggregate (DM4).

The third largest negative contributor to CFS Divisia M4 growth was commercial banks' small time deposits, contributing a decrease of 0.4% in the last 12 months ending September 2013. Their growth-rate weight was 2.4%. Unweighted, they decreased 14.8% in the last 12 months. This component is included in all of the aggregates, except the narrowest (DM1).

Figure 10 - Components of CFS Divisia M4 - Highlights for September 2013

Note: Each component's influence on DM4 growth (left chart column) reflects the component's unweighted growth (right chart column) and its growth-rate weight (middle chart column). The background and the bar colors are shaded to show which components are included in which aggregates. The lighter the green, the broader the aggregate.

* Average of last 12 monthly weighted contributions to CFS Divisia M4 growth rates (annual rates). Unlike the other percent calculations in this report, the weighted contributions use continuous percent changes computed from natural logs e.g. $(\ln(x) - \ln(x-1))$.

** Sweeps adjusted.

How to Read this Table:

To find a growth rate for a particular date range, find the column that contains the start quarter; then find the row that contains the end quarter of the date range. The cell where they intersect represents the annualized growth rate for that time period. For example, the last row contains the growth rates ending in the most recent quarter for each starting quarter going back 4 3/4 years. The outer diagonal shows the growth rates that are the quarter-over-quarter rates for the last few years. Red and green shades highlight the largest negative and positive growth rates.

Quarterly Data Highlights:

In the last quarter, CFS Divisia M4 grew by 3.0% (seasonally adjusted annual rate).

In the last year, CFS Divisia M4 grew by 3.5% (seasonally adjusted annual rate).

In the last 2 years, CFS Divisia M4 grew by 3.5% (seasonally adjusted annual rate).

In the last 3 years, CFS Divisia M4 grew by 2.8% (seasonally adjusted annual rate).

In the last 4 years, CFS Divisia M4 grew by 1.0% (seasonally adjusted annual rate).

Note: The growth-rate Divisia weights are the arithmetic average of the component's contemporaneous expenditure share and the asset's expenditure share for the prior month. The expenditure shares are each component's share in the sum of the products of each component's quantity and user-cost price.

Note: This table shows the contribution of each component over the trailing 12 months. The Divisia index is a chain-weighted calculation, based on growth-rates and weights relative to the prior months. This table shows the 12-month moving average of the monthly contributions. These calculations on this page are based on continuous annual percent changes (using natural logs).

Introduction to CFS Divisia Monetary Aggregates

Conventional money-supply measures are not adjusted to account for differences in the degree to which various assets actually serve as money, and hence implicitly assume that all assets in the aggregates contribute equally to the economy's monetary services. This assumption has not been reasonable since monetary assets began yielding interest over a half century ago. Divisia measures, using a mathematical formula derived by the famous 20th-century French economist, Francois Divisia, are a weighted aggregate, providing a more accurate picture of what is really happening to the economy's monetary service flow. The growth-rate weights for each component asset are based on their expenditure shares, with expenditures within the shares evaluated with user-cost pricing. The user-cost prices measure the interest foregone by owning the asset in question, instead of the higher, expected, benchmark rate, defined to be the rate of return on pure investment capital, providing no monetary services.

When their components are properly weighted, the broadest monetary aggregates (DM3, DM4-, and DM4) are almost always the best monetary aggregates, with DM4 commonly being the most useful of the three. As a result, this report focuses on the broadest, CFS Divisia aggregate (DM4). See W. A. Barnett, "The Optimal Level of Monetary Aggregation," *Journal of Money, Credit, and Banking*, November 1982.⁶ But we nevertheless provide the narrower CFS Divisia aggregates for comparison.

The CFS Divisia indexes in this release were developed by Professor William A. Barnett, based on his decades of work studying and refining Divisia measures of money supply, in accordance with the latest advances in economic measurement, modern economic aggregation theory, and state-of-the-art economic index-number theory. The Divisia formula for aggregating over imperfect substitutes was adapted for monetary and financial aggregation by W. A. Barnett in his seminal paper, "Economic Monetary Aggregates: An Application of Index Number and Aggregation Theory," *Journal of Econometrics*, September 1980, pp. 6-10.⁷ For more information about the history and methodology in this large literature, see <http://www.centerforfinancialstability.org/amfm.php>.

We consider the St. Louis Fed's MSI (monetary services index) Divisia aggregates to be an admirable and important contribution to public information, and we are indebted to the St. Louis Fed for helping us develop our Divisia monetary aggregates. Our narrowest Divisia monetary aggregates are similar to the St. Louis Fed's MSI Divisia aggregates, which are available only as narrow aggregates. However, we use a different benchmark interest-rate assumption, based on the recently introduced Bank of Israel formula. Since the Divisia quantity-index formula is relatively robust to the benchmark rate,

Barnett, *Getting It Wrong: How Faulty Monetary Statistics Undermine the Fed, the Financial System, and the Economy*, MIT Press, 2012, section 4.4, pp. 143-144.

⁷ Reprinted in W. A. Barnett and A. Serletis, *The Theory of Monetary Aggregation*, chapter 2, pp. 11-48. Also see W. A. Barnett, *Getting It Wrong: How Faulty Monetary Statistics Undermine the Fed, the Financial System, and the Economy*, appendix A, pp. 159-215.

CENTER FOR FINANCIAL STABILITY

Dialog • Insight • Solutions

the CFS narrow Divisia quantity indexes can be expected usually to behave similarly to the St. Louis Fed's MSI Divisia aggregates; but the CFS and St. Louis Fed's corresponding user-cost price aggregates behave very differently. For more information about the St. Louis Fed's MSI, see <http://research.stlouisfed.org/msi/> and <http://research.stlouisfed.org/fred2/release?rid=62&soid=4>.

The broad Divisia monetary aggregates, DM3, DM4-, and DM4, are available only from the CFS, since no other source currently exists for broad Divisia monetary aggregates for the US.

About the Center for Financial Stability

The Center for Financial Stability is an independent, nonpartisan, and nonprofit think tank dedicated to financial markets for the benefit of investors, officials, and the public.

CFS balances the big picture and financial market mechanics; serves as a private sector check on government actions; integrates finance, law, and economics; and supplements research with a community of public officials, academics, and market participants.

The organization's website is www.CenterforFinancialStability.org.

For more information about CFS Divisia please contact:

William A. Barnett	(Methodology)	(212) 626-2660	wbarnett@the-cfs.org
Lawrence Goodman	(Application)	(212) 626-2660	lgoodman@the-cfs.org

CFS Divisia Team: Jeff van den Noort (Chief Technology Officer), LeAnn Yee (Manager of Communications), Ryan Mattson (Research Associate), and Jia Liu (Research Associate).

With appreciation to Steve Hanke, Special Counselor at the CFS, for introducing Bill Barnett to the CFS.

The Center for Financial Stability (CFS) is a private, nonprofit institution focusing on global finance and markets. Its research is nonpartisan.
