### NEWS RELEASE

EMBARGOED UNTIL RELEASE AT 9:00 A.M. ET, MONDAY, SEPTEMBER 28, 2026.

## CFS DIVISIA MONETARY DATA FOR THE UNITED STATES:<sup>1</sup> AUGUST 2026

On February 23, 2021, the Federal Reserve Board enacted major changes to their H.6 Statistical Release which have impacted how the CFS Divisia Monetary Aggregates are calculated as well as our upcoming release schedule. See page 2 for more details.

### The CFS Featured Broad Divisia Monetary Aggregates in August 2026

- CFS Divisia M4, including Treasuries (DM4) – the broadest and most important measure of money calculated by the Center for Financial Stability – grew by 7.4% in August 2026, on a year-over-year basis. In contrast, CFS Divisia M4 increased by 5.6% in August 2025 over the preceding year.
- The narrower version of the CFS Divisia M4, excluding Treasuries, (DM4-), grew by 6.7% in August 2026 over the year, relative to a year-over-year gain of 5.8% in August 2025.
- CFS Divisia M3 (DM3) advanced by 6.9% year-over-year, relative to an increase of 5.6% in August 2025.

### The Narrow Divisia Monetary Aggregates in August 2026<sup>2</sup>

- CFS Divisia M2 (DM2) advanced by 6.0% year-over-year, relative to an increase of 4.1% in August 2025 over the preceding year.
- CFS Divisia M1 (DM1) advanced by 6.6% year-over-year, relative to an increase of 4.1% in August 2025 over the preceding year. Note that the composition of M1 changed in May 2020. See more below.

### Most Significant Factors Influencing CFS Divisia M4 in August 2026

#### *Positive Contributors to CFS Divisia M4 Growth*

- The largest positive contributor to CFS Divisia M4 growth was demand deposits, contributing an increase of 4.8% in the last 12 months ending August 2026. Their growth-rate weight was 21.1%. Unweighted, they increased 26.2% in the last 12 months. This component is included in all of the aggregates.
- The second largest positive contributor to growth was T-bills, contributing an increase of 1.4% in the last 12 months ending August 2026. Their growth-rate weight was 10.8%. Unweighted, they increased 13.5% in the last 12 months. This component is included only in the broadest aggregate (DM4).
- The third largest positive contributor to growth was institutional money-market funds, contributing an increase of 0.9% in the last 12 months ending August 2026. Their growth-rate weight was 7.0%. Unweighted, they increased 13.4% in the last 12 months. This component is included in DM3, DM4-, and DM4, but not in the narrower aggregates (DM1 and DM2).

---

<sup>1</sup> The CFS Divisia indexes in this release were constructed under the direction of Professor William A. Barnett. Dr. Barnett is the originator of the Divisia monetary aggregates, which he has been developing and refining for decades, in accordance with modern advances in economic aggregation and index-number theory.

<sup>2</sup> The narrow aggregates are similar to the Monetary Services Index supplied by the St. Louis Federal Reserve until 2013. See page 15 for the relationship between the CFS narrow aggregates and MSI. No other source currently exists for broad Divisia monetary aggregates, DM3, DM4-, and DM4 which are available only from the CFS.

## CENTER FOR FINANCIAL STABILITY

*Bold • Innovative • Practical*

### *Negative Contributors to CFS Divisia M4 Growth*

- The largest negative contributor to CFS Divisia M4 growth was other liquid deposits, contributing a decrease of 1.3% in the last 12 months ending August 2026. Their growth-rate weight was 30.9%. Unweighted, they decreased 3.7% in the last 12 months. This component is included in all of the aggregates.
- The second largest negative contributor to CFS Divisia M4 growth was small-denomination time deposits, contributing a decrease of 0.1% in the last 12 months ending August 2026. Their growth-rate weight was 4.0%. Unweighted, they decreased 1.4% in the last 12 months. This component is included in all of the aggregates, except the narrowest (DM1).

### **Data Revisions in the July 2026 Release**

The present release contains revisions to the Benchmark rate and other interest rates. The overall time series are even more consistent and representative of relative shifts in the U.S. financial system over time.

CFS will soon publish a methodology paper.

### **Changes in the January 2021 Release**

On February 23, 2021, the Federal Reserve Board enacted sweeping changes to the H.6 Statistical Release which are key in constructing all aggregates from the narrow M1 to the broadest M4 grouping. Most significantly for our calculations, the Federal Reserve combined Savings Deposits and interest bearing Other Checkable Deposits into a single “Other Liquid Deposits” category. They further discontinued the distinction in all levels of deposits between commercial bank and thrift accounts. This change affects the Small Denomination Time Deposits (retail level Certificates of Deposit). It was also announced that the levels of Institutional Money Market Funds will be discontinued this year.

The H.6 Survey is no longer publishing weekly seasonally adjusted data. While it will continue to provide weekly non-seasonally adjusted data, the seasonal adjustment of any levels is not completed until the monthly release.

In response to the changes, the CFS adjusted its construction of the Divisia Monetary Aggregates to provide for continued, accurate measure of the supply of monetary service in the US economy. The following series are now ended at April 2020, in line with the H.6 Survey: Savings Deposits at Commercials, Savings Deposits at Thrifts, Other Checkable Deposits at Commercial Banks, Other Checkable Deposits at Thrifts, Small Denomination Time Deposits at Commercial Banks, Small Denomination Time Deposits at Thrifts. The first four of these series are now combined into “Other Checkable Deposits” and paired with a user cost based on the interest rate on savings deposits provided by the FDIC. Small Denomination Time Deposits are now combined into one series and paired with the commercial bank interest rate on 3-month Certificates of Deposit. In line with the Federal Reserve’s data changes, the Divisia Monetary Aggregate data is adjusted back to May 2020 to account for these large survey changes.

To account for the change in the weekly to monthly release of the seasonally adjusted components of the H.6 Survey a new calendar of release dates is now provided in order to accurately gather all necessary data, construct the Divisia aggregate, and release it in a timely and consistent manner. These changes required extensive revision to the construction and scheduling of the Divisia monetary aggregates, and barring any future shocks to the Federal Reserve’s methods of providing data, we look forward to releasing the Divisia aggregates in their new form.

**Figure 1 - Recent Growth in Broad CFS Divisia Monetary Data<sup>3</sup>**

**Figure 2 - Recent Growth in Narrow CFS Divisia Monetary Data<sup>4</sup>**

<sup>3</sup> The broadest CFS Divisia monetary aggregates are **best** for most purposes. See p. 15 for background on the supporting research. We nevertheless provide the narrower CFS Divisia aggregates in Figure 2 for comparison.

<sup>4</sup> The narrow aggregates shown here, DM1 and DM2, are similar to the MSI (monetary services index) Divisia aggregates, supplied by the St. Louis Federal Reserve Bank until 2013. For more information about the St. Louis Fed's MSI Divisia aggregates and their relationship to the CFS Divisia monetary aggregates, see p. 15.

Note: Cells are shaded on a gradient from dark green (maximum) to dark red (minimum).

<sup>5</sup> While the broadest Divisia monetary aggregates are best for most purposes, we provide the narrower CFS Divisia aggregates for comparison. The narrow aggregates shown here, DM1 and DM2, are similar to the MSI (monetary services index) Divisia aggregates, supplied by the St. Louis Federal Reserve Bank until 2013. For more information about the St. Louis Fed's MSI Divisia aggregates and their relationship to the CFS Divisia monetary aggregates, see p. 15.

**Figure 6 - Components of CFS Divisia M4 - Highlights for August 2026**

Components in this table build from the narrowest aggregate at the top to the broadest at the bottom. For example, the darkest green in the left column includes components of DM1. The next tier shows the components included in DM2, but not within DM1.

| <b>Added into DM4</b>  | <b>T-Bills</b>                          | 1.4%                                                            | 10.8%                                                         | 13.5%                                                      |

Note: The row labels in the first column are shaded to show which components are included into which aggregates. Each data column is shaded on a gradient from dark green (maximum) to dark red (minimum). Traveler's Checks were included until their recent discontinuation by the Federal Reserve in January 2019.

\* Average of last 12 monthly weighted contributions to CFS Divisia M4 growth rates (annual rates). Unlike the other percent calculations in this report, the weighted contributions use continuous percent changes computed from natural logs.

## Components That Are Pulling CFS Divisia M4 Up

The largest positive contributor to CFS Divisia M4 growth was demand deposits, contributing an increase of 4.8% in the last 12 months ending August 2026. Their growth-rate weight was 21.1%. Unweighted, they increased 26.2% in the last 12 months. This component is included in all of the aggregates.

The second largest positive contributor to growth was T-bills, contributing an increase of 1.4% in the last 12 months ending August 2026. Their growth-rate weight was 10.8%. Unweighted, they increased 13.5% in the last 12 months. This component is included only in the broadest aggregate (DM4).

The third largest positive contributor to growth was institutional money-market funds, contributing an increase of 0.9% in the last 12 months ending August 2026. Their growth-rate weight was 7.0%. Unweighted, they increased 13.4% in the last 12 months. This component is included in DM3, DM4-, and DM4, but not in the narrower aggregates (DM1 and DM2).

## Components That Are Pulling CFS Divisia M4 Down

The largest negative contributor to CFS Divisia M4 growth was other liquid deposits, contributing a decrease of 1.3% in the last 12 months ending August 2026. Their growth-rate weight was 30.9%. Unweighted, they decreased 3.7% in the last 12 months. This component is included in all of the aggregates.

The second largest negative contributor to CFS Divisia M4 growth was small-denomination time deposits, contributing a decrease of 0.1% in the last 12 months ending August 2026. Their growth-rate weight was 4.0%. Unweighted, they decreased 1.4% in the last 12 months. This component is included in all of the aggregates, except the narrowest (DM1).

## CENTER FOR FINANCIAL STABILITY

**Figure 11 - Components of CFS Divisia M4 - Highlights for August 2026**

Note: Each component's influence on DM4 growth (left chart column) reflects the component's unweighted growth (right chart column) and its growth-rate weight (middle chart column). The background and the bar colors are shaded to show which components are included in which aggregates. The lighter the green, the broader the aggregate.

\* Average of last 12 monthly weighted contributions to CFS Divisia M4 growth rates (annual rates). Unlike the other percent calculations in this report, the weighted contributions use continuous percent changes computed from natural logs e.g.  $(\ln(x) - \ln(x-1))$ .

**Figure 12 - CFS Divisia M4 Quarterly Growth Triangle**

Recent Quarterly History (Compound Annual Rates of Change)

This triangular report design was originated by Federal Reserve Bank of St. Louis to show seasonally adjusted annualized growth rates for a variety of time periods.

| Terminal<br>Period | Initial Period |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |            |          |          |

## How to Read this Table:

To find a growth rate for a particular date range, find the column that contains the start quarter; then find the row that contains the end quarter of the date range. The cell where they intersect represents the annualized growth rate for that time period. For example, the last row contains the growth rates ending in the most recent quarter for each starting quarter going back 4 3/4 years. The outer diagonal shows the growth rates that are the quarter-over-quarter rates for the last few years. Red and green shades highlight the largest negative and positive growth rates.

## Quarterly Data Highlights:

In the last quarter, CFS Divisia M4 grew by 8.9% (seasonally adjusted annual rate).

In the last year, CFS Divisia M4 grew by 7.4% (seasonally adjusted annual rate).

In the last 2 years, CFS Divisia M4 grew by 6.3% (seasonally adjusted annual rate).

In the last 3 years, CFS Divisia M4 grew by 5.8% (seasonally adjusted annual rate).

In the last 4 years, CFS Divisia M4 grew by 4.2% (seasonally adjusted annual rate).

### Introduction to CFS Divisia Monetary Aggregates

Conventional money-supply measures are not adjusted to account for differences in the degree to which various assets actually serve as money, and hence implicitly assume that all assets in the aggregates contribute equally to the economy's monetary services. This assumption has not been reasonable since monetary assets began yielding interest over a half century ago. Divisia measures, using a mathematical formula derived by the famous 20th-century French economist, Francois Divisia, are a weighted aggregate, providing a more accurate picture of what is really happening to the economy's monetary service flow. The growth-rate weights for each component asset are based on their expenditure shares, with expenditures within the shares evaluated with user-cost pricing. The user-cost prices measure the interest foregone by owning the asset in question, instead of the higher, expected, benchmark rate, defined to be the rate of return on pure investment capital, providing no monetary services.

When their components are properly weighted, the broadest monetary aggregates (DM3, DM4-, and DM4) are almost always the best monetary aggregates, with DM4 commonly being the most useful of the three. As a result, this report focuses on the broadest, CFS Divisia aggregate (DM4). See W. A. Barnett, "The Optimal Level of Monetary Aggregation," *Journal of Money, Credit, and Banking*, November 1982.<sup>6</sup> But we nevertheless provide the narrower CFS Divisia aggregates for comparison.

The CFS Divisia indexes in this release were developed by Professor William A. Barnett, based on his decades of work studying and refining Divisia measures of money supply, in accordance with the latest advances in economic measurement, modern economic aggregation theory, and state-of-the-art economic index-number theory. The Divisia formula for aggregating over imperfect substitutes was adapted for monetary and financial aggregation by W. A. Barnett in his seminal paper, "Economic Monetary Aggregates: An Application of Index Number and Aggregation Theory," *Journal of Econometrics*, September 1980, pp. 6-10.<sup>7</sup> For more information about the history and methodology in this large literature, see <http://www.centerforfinancialstability.org/amfm.php>.

A prior source of Divisia Monetary Aggregates for the United States was the St. Louis Federal Reserve Bank, which called those aggregates the MSI (Monetary Services Index). Before the MSI, the original source was a mailing list maintained by the research staff at the Federal Reserve Board in Washington, DC.

The broad Divisia monetary aggregates, DM3, DM4-, and DM4, are available only from the CFS, since no other source currently exists for broad Divisia monetary aggregates for the US.

## CENTER FOR FINANCIAL STABILITY

*Bold • Innovative • Practical*

### CFS Divisia Resources on the Center for Financial Stability Site

See [www.centerforfinancialstability.org/amfm.php](http://www.centerforfinancialstability.org/amfm.php) for more information about the following topics:

- Introduction to Advances in Monetary and Financial Measurement (Divisia)
- Monetary Data for the US: including methodology, data sources, and key takeaway points
- International Advances in Monetary and Financial Measurement: Divisia and Fisher-ideal monetary aggregates for a vast number of countries throughout the world
- Library: Key articles and books regarding advances in monetary and financial measurement

### About the Center for Financial Stability

The Center for Financial Stability is an independent, nonpartisan, and nonprofit think tank dedicated to financial markets for the benefit of investors, officials, and the public.

CFS balances the big picture and financial market mechanics; serves as a private sector check on government actions; integrates finance, law, and economics; and supplements research with a community of public officials, academics, and market participants.

The organization's website is [www.centerforfinancialstability.org](http://www.centerforfinancialstability.org).
